

PODS Capabilities

History

PODS is the originator of the portable moving and storage industry and was founded in Clearwater, Florida in 1998. With PODS, moving and storage is more convenient because we do all of the driving; you don't need to make multiple trips back and forth to a storage facility. Plus, it's flexible, because you can take as long as you need to load and unload, instead of doing it all in one day. PODS currently has service in 48 states in the U.S., and throughout Canada and Australia. We have successfully completed more than 1,000,000 deliveries.

Here's how PODS works

PODS delivers an empty storage container(s). You load it on your schedule and at your pace. When you're ready, we pick up your container and drive it across town, across the country, store it at one of our many secure Storage Centers or at your location.

Our containers can be used for moving, storage or both. Below are just a few ways our containers can be used:

- On-site Storage at your location
- Storage in our Secure Storage Centers
- Local or Long Distance Moving
- Custom Logistics Solutions
- Emergency Response
- Employee Relocation
- Office Relocation
- Staging during Renovations and Events
- Seasonal Storage

Dedicated representatives

We have dedicated representatives to assist you throughout the entire process, which includes: quoting, booking, and final delivery. When you use PODS, our experienced representatives will work with you to ensure your experience is hassle and stress free.

Your equipment is secure with PODS quality containers and state-of-the-art systems

PODZILLA®

All of our delivery trucks are equipped with PODZILLA, our patented hydraulic lift system, which is designed to keep the container level and prevent shifting of contents while loading onto and off of the truck. PODZILLA is only available with PODS.

PODS® Tracking System

Our state-of-the-art tracking system helps to ensure that deliveries and pick-ups are on-time, and we know where your container is at all times.

PODS® Containers

Our U.S. made, weather-resistant containers have a steel frame with an aluminum-skin exterior. The loading and unloading process is simple because the container is at ground level and the translucent roof illuminates the interior of the container with ambient light.

Our containers have been tested to withstand winds up to 110 mph, when partially loaded, and are available in three different sizes:

- 8'x8'x16' container: 10,000 lbs. capacity
 - 8'x8'x12' container: 8,000 lbs. capacity
 - 8'x7'x7'* container: 5,000 lbs. capacity
- *Only available in certain markets.

Where to find PODS

PODS services 48 U.S. states, Canada and Australia.
